cristian@Cristian: ~/shellscrips
Ubuntu
Ubuntu
Ubuntu
GNU nano 8.7.1 copiar_carpeta.sh *
#!/bin/bash
1. Definir las variables de origen, destino y el archivo de texto
ruta_origen="/home/cristian/shellscrips"
ruta_destino="/home/cristian/shellscrips2"
archivo_confirmacion="/home/cristian/ConfirmacionCopIascrip.txt"
2. Copiar la carpeta y evaluar si el comando fue exitoso
if cp -r "$ruta_origen" "$ruta_destino"; then
Si la copia se realiza correctamente
echo "la carpeta shellscrips2 se ha creado satisfactoriamente" > "$archivo_confirmacion"
else
Si ocurre un error (ej. la carpeta de origen no existe o faltan permisos)
echo "no se ha podido crear la carpeta shellscrips2" > "$archivo_confirmacion"

GNU nano 8.7.1 /tmp/crontab.6k4ilU/crontab
Edit this file to introduce tasks to be run by cron.
To define the time you can provide concrete values for
minute (m), hour (h), day of month (dom), month (mon),
and day of week (dow) or use '*' in these fields (for 'any').
Notice that tasks will be started based on the cron's system
daemon's notion of time and timezones.
Output of the crontab jobs (including errors) is sent through
email to the user the crontab file belongs to (unless redirected).
For example, you can run a backup of all your user accounts
at 5 a.m every week with:
0 5 * * 1 tar -zcf /var/backups/home.tgz /home/
For more information see the manual pages of crontab(5) and cron(8)
m h dom mon dow command
#Tarea 15-Oct-2026
