Introducción

Este trabajo tiene como objetivo mostrar el procedimiento para listar los paquetes instalados en una distribución de Linux, en este caso utilizare WSL. Se emplearon herramientas **dpkg** y **apt**, propias del sistema de gestión de paquetes de esta distribución, para obtener el listado completo de paquetes, el total de paquetes instalados y la exportación de dicha información a un archivo de texto.

Desarrollo de la actividad

1. Mostrar todos los paquetes instalados

Para listar todos los paquetes instalados en la distribución Linux utilizada por WSL, se emplea el siguiente comando:

```
dpkg -l
```

```

cristian@cristian:~$ dpkg -l

Descripción: **dpkg**: se encarga de proporcionar información sobre los paquetes, **-l**: es la abreviatura de --list, le indica al comando que debe mostrar una tabla con todos los paquetes de software que se encuentran registrados en el sistema, junto a su estado actual, nombre, arquitectura y una breve descripción. En pantalla muestra una lista masiva con todos los paquetes instalados y configurados en el equipo

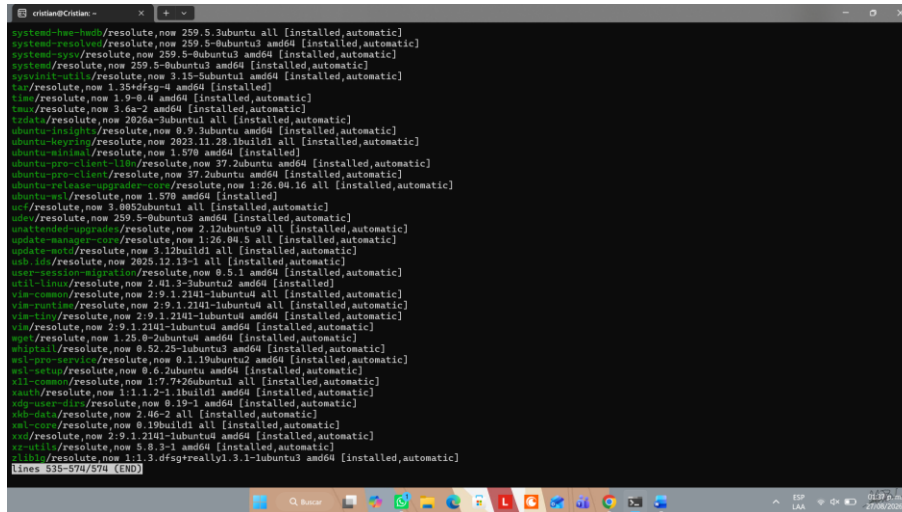

También es posible obtener un listado equivalente mediante el gestor de alto nivel apt:

```
apt list --installed
```

```
cristian@cristian: ~$ apt list --installed

cristian@Cristian:~$ dpkg --get-architecture=$(dpkg-query -f='${Architecture}' -W -f='${Package} ${Architecture} ${Version}\n' | grep -c '^ii$') --get-selections | grep -c '^ii$'
574
```

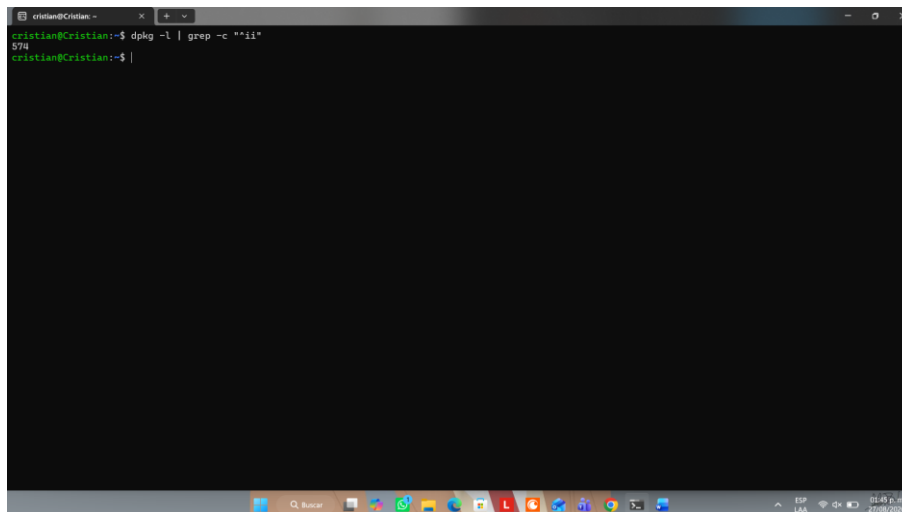

*Descripción: **apt**: es la interfaz más moderna que interactúa con el sistema de paquetes, encargándose también de descargar dependencias desde internet, **list**: indica a **apt** que muestre el listado de paquetes de software en lugar de instalarlos o borrarlos, **--installed**: filtra la lista para que únicamente muestre los paquetes que están instalados actualmente en el sistema.*

2. Mostrar el total de paquetes instalados

Para obtener el número total de paquetes instalados, se cuentan las líneas del listado anterior cuyo estado indica instalación correcta (prefijo "ii"):

```
dpkg -l | grep -c '^ii'
```

```
cristian@Cristian:~$ dpkg -l | grep -c '^ii'
574
```

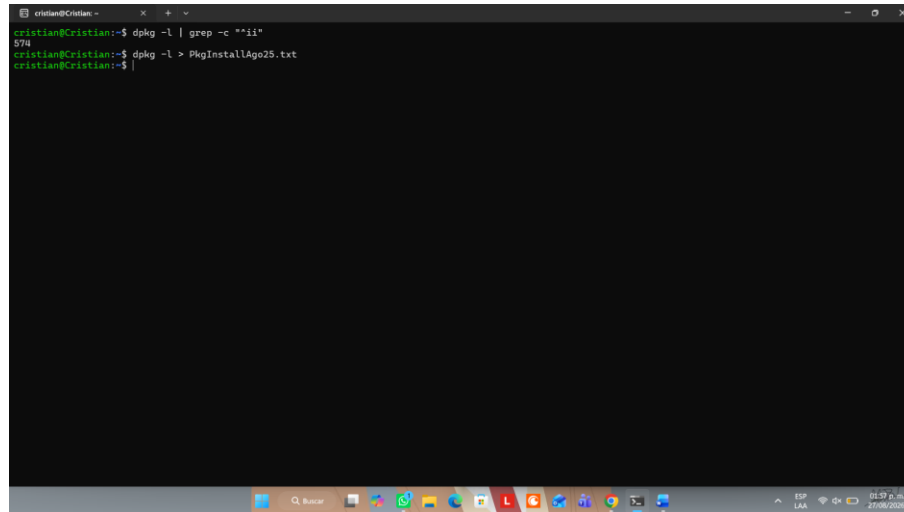

*Descripción: **dpkg -l**: lista todos los paquetes de software registrados en el sistema, **|**: pasa la salida completa de **dpkg -l** al siguiente comando sin mostrarla en pantalla, **grep**: filtra líneas de texto, **^ii**: busca únicamente las líneas que comienzan con ii (el estado que indica que un paquete está instalado correctamente y **-c** (count): cuenta cuantas líneas coinciden en lugar de imprimirlas. Al ejecutarlo, la terminal no abre un listado paginado como el comando anterior, sino que solo devolverá un número único en pantalla indicando el total de paquetes instalados.*

3. Exportar la lista de paquetes al archivo PkgInstallAgo25.txt

Para exportar el listado completo de paquetes instalados al archivo PkgInstallAgo25.txt, se redirige la salida del comando `dpkg -l` hacia un archivo de texto:

```
dpkg -l > PkgInstallAgo25.txt
```

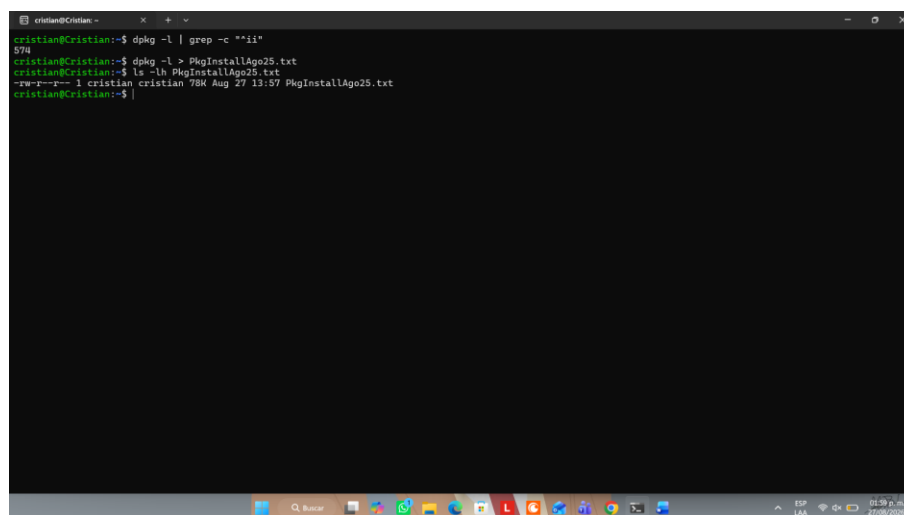

A terminal window titled 'cristian@cristian' showing the execution of the command `dpkg -l > PkgInstallAgo25.txt`. The prompt is `cristian@cristian:~$`. The command is entered, and the prompt returns to `cristian@cristian:~$`. The terminal output is empty, indicating the command executed successfully without displaying any text to the user.

```
cristian@cristian:~$ dpkg -l | grep -c ""  
574  
cristian@cristian:~$ dpkg -l > PkgInstallAgo25.txt  
cristian@cristian:~$
```

*Descripción: Este comando sirve para guardar el listado completo de paquetes en el sistema en un archivo de texto. **Dpkg -l**: lista todos los paquetes de software registrados en el sistema, **>**: toma la salida del comando y la redirecciona directamente a un archivo (si el archivo no existe, lo crea), **PkgInstallAgo25.txt**: es el nombre del archivo de texto destino donde se escribirá toda la información generada por **dpkg -l**. Se guardará en el directorio actual donde se encuentra situado en terminal (home). Al ejecutar, la pantalla no muestra nada, la terminal simplemente se ejecutará y regresará al cursor principal y en el sistema de archivos se habrá creado el archivo llamado **PkgInstallAgo25.txt**.*

Para verificar que el archivo se generó correctamente:

```
Ls -lh PkgInstallAgo25.txt
```

A terminal window titled 'cristian@cristian' showing the execution of the command `ls -lh PkgInstallAgo25.txt`. The prompt is `cristian@cristian:~$`. The command is entered, and the prompt returns to `cristian@cristian:~$`. The terminal output shows the file `PkgInstallAgo25.txt` with its permissions, size, and creation date.

```
cristian@cristian:~$ dpkg -l | grep -c ""  
574  
cristian@cristian:~$ dpkg -l > PkgInstallAgo25.txt  
cristian@cristian:~$ ls -lh PkgInstallAgo25.txt
